

Skyfol[®] PPF

Professional paint protection films
KEEP YOUR CAR NEW!

Skyfol[®]
Film Solutions

BENEFITS OF SKYFOL PPF

Have you bought your new car and you would like the paintwork to remain undamaged for years? Are you fed up with stone chips? Do you often drive at places where vegetation can damage the paintwork? Has someone ever scratched your car with a key? Has your door been hit in the car park of shopping centres? If you want to keep your car immaculate, Skyfol paint protection films will be of great help.

ALWAYS NEW

Do you want to preserve the original look of your car so that the paint is exactly the same as when you took the car home for the first time? Choose a Skyfol PPF material and protect your car paint against external exposure and wear.

Paintworks become more matte and faded over time. With subsequent maintenance this can be helped, but with each procedure we do irreversible interventions on the surface of the car. Either the layer of paint becomes thinner, or chemicals are applied to the surface that gradually wear off and lose its resistance. Skyfol PPF materials offer the strongest protection for paintworks. For many years, they certainly protect from environmental influences.

What effects are we talking about?

► **Dust:** airborne dust at high speeds scratches the surface, and after some years of driving on the highway, it leaves a permanent mark on the paintwork

► **UV radiation:** the sun will fade the colour, it's just a matter of time; solar radiation makes the layer of paint fade and causes premature aging of the lacquer layer.

► **Hailstorms:** summer hail can do a lot of damage to the paintwork; we see a lot of new cars that are completely disfigured by hail

► **Extreme hot and cold temperatures:** in high heat, the lacquer layer will soften and become very sensitive to surface scratches, while in winter the lacquer layer becomes rigid and can chip off easily

PROTECTION AGAINST DAMAGES

Are you fed up with stone chips? Has someone hit your door in a car park? Have you ever had your car scratched by a bush when you had to pull over? Protect your new car with a Skyfol PPF material. In use, our car is exposed to many mechanical impacts, and vandals can also create a lot of inconveniences. The perfect protection against these factors is provided by Skyfol PPF materials.

What impacts shall you think of more specifically?

► **Stone chips:** at high speed, even a tiny pebble can cause huge damage to the paintwork

► **Parking:** the door of the adjacent car is pushed against your car, or a shopping cart hits your car and causes unpleasant and lasting damage to the paintwork

► **Vegetation:** bushes and twigs hanging over the road often scratch the entire side of the car.

► **Narrow parkways:** we often scratch the bumpers, which repair is time-consuming and costly, and generally will not be like the original anymore

► **Vandalism:** Sometimes we are forced to leave our car in a place where there is a risk that we will find it with the doors scratched

EASY TO CLEAN

Have you ever struggled to clean your paint protection film? Do you want a surface that is easier to clean than paint?

Skyfol PPF paint protection film has a big advantage over its competitors to make cleaning much easier. The surface tension of the upper protective layer was adjusted to be water-repellent. Thanks to this water-repellent feature, cleaning is considerably simpler as contamination cannot get into the structure of the film.

Older paint protection films were prone to yellowing and stains caused by dirt could not be removed. After a change of technology in 2006, the next generation of raw materials appeared, and they were much more resistant. However, white paintwork still had a problem with yellowing, and the removal of surface contamination was also an issue.

The next development took place in 2010, that was a huge step forward, with the appearance of surface-coated **paint protection films**. The surface of the film started to have a special coating that protected against discoloration, and the surface also became significantly easier to clean - these films did not turn yellow on white cars. Nevertheless, there were still some uncomfortable problems, such as the ability to removing heavy contaminants like bug stains, as well as the fact that the film surface still got dirtier more quickly than the uncoated parts. However, in 2016, the ultimate technological solution was introduced with the help of nanotechnology: the surface coating of the film became water-repellent. From then on, even more critical contaminants can be easily removed and finally we can say that cleaning the film surface has become easier than painted surfaces. **The perfect paint protection film was born.**

EXTRA DURABLE

Paint protection films are the most durable way to protect your car. The polyurethane film is one of the most durable materials that humankind can make, initially developed for space technology and then for aeronautical use. Nowadays, it is widely used in the construction industry for insulating materials that perform well for up to 30-40 years.

The expected durability of Skyfol PPF Nano films is up to 12 years (depending on the specific product). The base material of most of the films lasts longer, but due to the removability of the adhesive layer, we have set the specified warranty period for installation in our network of installers. For further warranty information and exceptions, please visit our Skyfol website or see the Skyfol warranty cards.

We recommend replacing the product after the period is over, to always provide maximum protection for your car.

The function of car body protection films is to protect the paint properly, so it is important that they do not leave adhesive residue and do not remove the top layer of varnish even in critical parts and even after several years. Skyfol PPF Nano adhesive has been removed from thousands of cars without problems so far, with the right tools and technology, adhesive residues and surface damages can be avoided. 20 years ago, we were the first to start to distribute paint protection films in the CEE region, and by now we have become one of Europe's leading brands, we have unique experience in the industry

THE CLEAR GLOSS PAINT PROTECTION FILM RANGE

Skyfol® PPF Nano Elite³

Say goodbye to
contamination

REVOLUTIONARY ANTI- STAINING!

FEEL THE DIFFERENCE IN INSTALLATION

While preserving the strengths of the highly popular Skyfol PPF Nano Elite², we have succeeded in elevating quality to an even higher level in every aspect. Thanks to its more **flexible coating structure**, Skyfol PPF Nano Elite³ provides a perfect answer to installation challenges! The film is **easier and therefore faster to stretch and shape**, even on complex surfaces.

NO-STAIN SURFACE COATING

Not only has the film itself become more durable, but its coating has also been reinforced, bringing numerous benefits. Most importantly, it offers **industry-leading resistance to staining**, while its surface is **silky smooth, highly glossy**, and ensures a **completely orange-peel-free** finish. Nano Elite³ performs exceptionally well even in high-temperature climates and on white cars.

UNPARALLELED DURABILITY

Skyfol PPF Nano Elite³ is 25 microns thicker than other premium products available on the market. With its **225-micron total thickness**, it provides exceptional durability while maintaining a flexible structure that allows for fast and effortless installation.

Skyfol® PPF Nano³

A solution to large
bonnet problems:
**AVAILABLE
IN 72"**

EASY INSTALLATION

If easy installation is a top priority for you, Skyfol PPF Nano³ is the best choice. Its soft coating offers extreme flexibility, which makes **the installation as easy as possible**. In some cases in the PPF industry, the softer structure of the coating is often accompanied by low resistance against contamination. This can be a problem especially on white or light-coloured cars.

Nano³ has a solution for that! Its coating has excellent **hydrophobicity** (very easy to clean) and an outstanding **anti-staining** feature which tends to show much less contamination – while you don't have to give up the **instant self-healing** properties and **perfect glossy look**.

Skyfol® PPF Nano³ EVO

CONSISTENT HIGH PERFORMANCE

Skyfol PPF Nano³ EVO, thanks to its strong adhesive, provides outstanding tack right from the very start of installation – a feature that instantly makes it a favorite among installers. Its **exceptional flexibility** allows the film to adapt more easily to complex curves and shapes, ensuring **quicker and more precise installation**.

With its **high-gloss, crystal-clear surface**, the film adds an elegant shine to any vehicle, while the **reinforced coating** delivers enhanced resistance against everyday external impacts.

During the development of Skyfol PPF Nano³ EVO, special attention was given to **consistent manufacturing quality**. For professional installers, it is essential that a film behaves predictably at all times, as their established installation techniques can only deliver flawless results under consistent conditions.

Nano³ EVO ensures the same reliable performance and handling in every production batch – this consistency is one of its greatest strengths, and a key reason why professionals can place their long-term trust in it.

Skyfol PPF Nano³ EVO represents the **perfect combination of uncompromising protection and exceptional consistency**.

INTRODUCING THE SKYFOL'S MATT PAINT PROTECTION FILM RANGE

Matte paintworks usually have a delicate surface. Cleaning them requires a lot of effort. *Of course, you want to protect them!* Skyfol has an ultimate range of matte PPFs that provides not only an **awesome matte finish** but also **protects** against damages and resists staining and contamination, making the car much **easier to clean**. And here's the kick: you want to turn your **glossy car into matte**? Skyfol's matte PPFs can cope with it, too! When installed on glossy paintwork, the car gets a completely **new look**: more elegant, more modern, sporty, and unique. Nowadays, matte paintworks are still very expensive and not so widespread, this is why matting the vehicle is an excellent tool to make our car unique, while also providing complete protection

Skyfol® nanoElite
Matt

FOR MATTE PAINTWORK

AMAZING MATTE FINISH

Looking for protection for matte paintwork? Skyfol has you covered. Not only is it suitable for matte paintworks, the Skyfol Nano Elite Matt has also been optimized for completely wrapping glossy cars in matte. Its flexible film and enhanced adhesive will help you get the job done.

SUPER EASY TO CLEAN

A matte finish is always harder to keep clean... not anymore! The Nano Elite Matt utilises a very special coating technology that we recently introduced amongst our gloss solutions with the Skyfol Nano Elite PPF. A car with this film will be easier to keep clean than the factory paint.

STAIN RESISTANT

Matte paint protection films tend to be more sensitive to staining due to their uneven surfaces that give them a matte finish. With the new coating formulation developed for the Nano Elite, the Nano Elite Matt will resist staining for ages to come.

ELEGANT MATTE APPEARANCE

... but how matte should it be?

Matte PPF range doesn't end here. Our goal is to provide a wide range of products, as the demands and expectations regarding 'the matte finish' may all be different.

Skyfol® PPF nano Satin ST

STYLISH SATIN LOOK

Skyfol PPF Nano Satin ST gives your car a **distinctive matte appearance**, while its special coating provides **excellent resistance against contaminants** such as water spots, insect remains, bird droppings, road oils, and surface yellowing.

The uniqueness of the film is reflected in its name — the "ST" (Super Tack) — referring to its high-tack adhesive, which instantly makes it a favorite among installers. Thanks to the **reinforced adhesive layer**, folding the film around edges is **effortless**, allowing for **faster and trouble-free installation**.

Naturally, Skyfol PPF Nano Satin ST includes all the benefits of paint protection films, offering reliable **protection against mechanical, environmental, and human-induced damage**.

As expected, its **self-healing technology** allows small surface scratches to disappear with heat.

While satin films typically alter the car's original color slightly, the Nano Satin ST preserves it — and even enhances it with a **refined satin finish** that makes the vehicle truly irresistible.

SKYFOL PPF WRAP the **HIGH end** **WRAPS**

MORE DURABLE THAN
PVC CAR WRAP FILMS

Skyfol has expanded the palette of coloured paint protection films. Experience the ultimate fusion of efficient protection, extra durability and style with our high-end wraps that elevate film installation to a new level.

Innovation

PPF-S FOR TRADITIONAL WET INSTALLATION METHOD AND MATERIALS WITH AIR CHANNEL TECHNOLOGY ARE ALSO AVAILABLE

In addition to films with the traditional wet installation method, we also offer air channel technology, enabling a dry installation process.

SELF-HEALING
FEATURE

NEW COLOURS AVAILABLE

- BETTER GLOSS THAN THE ORIGINAL FACTORY PAINTWORK!
- DURABLE PROTECTION COMBINED WITH STUNNING APPEARANCE, PERFECT GLOSSY COLOURS

EASILY ACCESSIBLE
FROM STOCK

UNIQUE STYLE

PROTECTION WITH UNPARALLELED ELEGANCE

Skyfol PPF Wrap not only protects the vehicle against damages but also provides a perfect glossy colour with a stunning appearance that turns heads wherever you drive the car.

AVAILABLE DIRECTLY FROM STOCK

A wide range of colours are available right away from stock. No need to give up your most precious colour just because it's not kept on stock! Got a damaged car with coloured PPF that needs fixing? Say goodbye to waiting for weeks and months to match the exact colour! It will be easy to replace with the in-stock films, accessible through your local exclusive Skyfol distributor! No need to buy a full roll, simply request the length in cut linear meters that suits your needs.

DISCOVER THE FUTURE OF CAR
WRAPPING—WHERE
PROTECTION MEETS PERFECTION.

PAINT PROTECTION FILMS COMBINED WITH HEAT PROTECTION

THE EXTERIOR WINDOW FILM

An innovation in the automotive window film industry

Win the fight against the sunroofs and the rear windcreens of coupes and sedans!

Easy exterior installation

Tired of crawling inside the car to install film on the rear windscreen? Or looking for a faster, easier alternative to heat shrinking when working on today's increasingly large sunroofs? Here's the solution! Working on sunroofs and rear windcreens of coupes and sedans has never been this easy!

SKYFOL BABYGUARD BOOST is a revolutionary window film, which **can be installed on the exterior of the window**. It is a **TPU-based material** – having the advantages of the PPFs, it is much **faster and easier to install**, while it has an **outstanding heat protection** and **durability**. It protects the vehicle from solar energy, and has a self-healing coating against minor scratches, damage caused by car wash brushes, and other similar impacts.

No heat gun, no shrinking; PPF-like installation ensures fast work. No more crawling inside the car during installation; not to mention dot matrix, and even the defroster will no longer be a problem!

- DURABLE LIKE PPF
- EXTERIOR INSTALLATION
- NO MORE VISIBLE DOT MATRIX
- EXTREME HEAT REJECTION

PPF LIKE STRUCTURE
CRYSTAL CLEAR
DISTORTION FREE
EASY INSTALLATION

Skyfol VisionGuard provides strong protection for the windshield against stone chips and other mechanical impacts, while ensuring crystal-clear, distortion-free visibility thanks to its premium adhesives and special design.*

Its unique construction and self-healing coating guarantee durability, while its PPF-like design allows for quick installation without the need for a heat gun.

* Please note: the film is intended to offer surface protection. The film does not guarantee 100% protection against glass damage, it reduces the probability radically.

PPF FOR HEADLIGHTS

Skyfol® PPF Shadow

GIVE STYLE TO LAMP PROTECTION

Professional lamp protection film with coloured tone? Skyfol offers 4 different levels of lamp design films: 30%, 50%, 60% and 70% visible light transmission. Crystal clear solution for headlights. Self-healing coating and appropriate thickness will give you a perfect protection and great optical tuning. The level of gloss is amazing, the film is very flexible to be easily installed on any shape. A professional protection film for lamps with style.

Protects against

► Scratches

Intentional damages caused by vandals, scratches caused by bushes or scratches during parking will not result in any damage to your paintwork. Micro-scratches due to cleaning and normal wear will disappear from the surface of your paint protection film.

► Contamination

Severe contamination, like insects, bird droppings, etc. can leave stains on your paintwork. Paint protection film gives 100% protection from such contamination, while its surface tension has been developed so that nearly all contamination can be cleaned from the surface.

► Fading Colour

Normal wear from dust particles, cleaning, sunlight will have a devastating effect on your paintwork. When protected with paint protection film you will have the same state of the paintwork as when you drove out of the showroom.

► Stone chips

Debris on the road is a source of severe damage to the paintwork. To give proper protection, the barrier must be flexible enough to absorb the energy, yet strong enough not to tear. Polyurethane does just that, while also offering high-gloss surface, resulting in an invisible protective layer on your car.

C-COAT PAINT PROTECTION FILMS

Building on the reputation of C-Coat's premium car care products and ceramic coatings, the brand now proudly introduces its new **C-Coat PPF paint protection film lineup**, available in two gloss and one satin finish.

Each version has been designed to meet different installer preferences and aesthetic goals – yet they all share the same C-Coat hallmarks: **exceptional quality, professional-grade performance, and a remarkably competitive price.**

Explore the full range and discover how C-Coat PPF films make installation easier, faster, and more efficient – while ensuring a flawless, long-lasting finish.

C-COAT PPF FLEX PAINT PROTECTION FILM

The **C-Coat PPF Flex** has quickly become a favorite among installers thanks to its **remarkable flexibility and effortless handling**. Its soft, elastic structure allows the film to adapt perfectly to complex curves, ensuring a smooth and precise installation even on challenging surfaces.

One of its most impressive features is its **instant self-healing technology** – micro-scratches disappear almost immediately, without the need for heat or sunlight. This makes Flex an ideal choice for professionals who want speed and reliability without compromise.

C-Coat PPF Flex delivers a refined glossy finish, enhanced durability, and easy maintenance, offering an **exceptional price-to-performance ratio**.

- OUTSTANDING FLEXIBILITY
- EASY HANDLING
- INSTANT SELF-HEALING
- AFFORDABLE PRICE TAG WITH OUTSTANDING QUALITY

C-COAT PPF GLOSS PAINT PROTECTION FILM

For those seeking an ultra-premium finish, **C-Coat PPF Gloss** brings an **extraordinary level of shine and clarity** to any vehicle. Its hard yet precise coating delivers superior protection and long-term durability, while maintaining an elegant, mirror-like surface.

The film's **excellent adhesion, anti-staining capability, and self-healing performance** make it an ideal choice for installers who prefer slightly stiffer materials that allow for confident stretching and perfect alignment.

Experience the perfect balance of premium **performance and accessible pricing** – a film that redefines value in the paint protection industry.

- EXCEPTIONALLY HIGH-GLOSS FINISH
- EXCELLENT ANTI-STAINING PROPERTIES
- DURABLE COATING
- AFFORDABLE PRICE TAG WITH OUTSTANDING QUALITY

C-COAT PPF SATIN PAINT PROTECTION FILM

The **C-Coat PPF Satin** combines subtle elegance with outstanding functionality. Its refined satin surface transforms the car's appearance with a sophisticated, modern look, while delivering reliable long-term protection.

Engineered for **ease of installation**, the Satin version offers excellent **elasticity, secure adhesion, and remarkable scratch resistance**. Its advanced coating prevents staining and maintains the surface's smooth, matte perfection for years to come.

A perfect choice for those who seek understated style without compromising protection or performance.

- EXCELLENT ANTI-STAINING PROPERTIES
- EXCEPTIONAL ELASTICITY
- OUTSTANDING SCRATCH RESISTANCE
- AFFORDABLE PRICE TAG WITH OUTSTANDING QUALITY

SKYFOL'S NEW CERAMIC COATINGS FOR EVERY PROFESSIONAL PPF INSTALLER WORKSHOP...

CERAMIC COATINGS

PRO

The durable protection

Professional grade ceramic coating. Extremely durable and hydrophobic – the best and most reliable solution for PPF and car wrap film as well.

Durability up to 3 years
Fast curing time
Extremely hydrophobic

VALUE

Extremely hydrophobic and easy to clean

Entry level ceramic coating. Can be used as an annual renewing coating for C-COAT Pro, or as a main coating for a shorter period.

Easy application
Durability up to 12 months

GLASS

Protection on glass

Creates an invisible water-repellent layer on the windshield, which will withstand water and contamination, making it easier to clean, allowing easy & quick removal of insects and ice.

Clear, no distortion
Durability up to 12 months

RESTORE

Designed for Paint Protection Films

A high-performance ceramic coating specifically developed for paint protection films, featuring a clear coat layer similar to the factory finish of paint protection films. It enhances the film's gloss, improves hydrophobic properties, and protects the surface even against corrosive contaminants that could cause discoloration.

The best choice for matte PPF
Keeps colored PPF unchanged
Durability up to 36 months

THE BEST CHOICE
FOR PPF AND CAR
WRAP FILMS

What do ceramic coatings do? C-COAT coatings provide long-lasting protection for the car, whether protecting the paint or boosting the performance and longevity of paint protection films. Ceramic coatings create a long-lasting protective layer on the surface, that preserves the original shine and gloss of the car. Thanks to their extraordinary hydrophobic feature, they make car washing extremely easy

...AND A WIDE RANGE OF CAR CARE PRODUCTS AT ONE PLACE
EVERY INSTALLER'S AND CAR DETAILER'S DREAM

MAINTENANCE

PREWASH

Pre-wash preparation with extremely effective cleaning power.

GRAPHENE SHAMPOO

Shampoo for car care after film installation, enriched with graphene. Provides a very hydrophobic surface.

JET WET COAT

A hydrophobic coating that can be sprayed on the car right after car wash very easily and quickly.

BUG OFF

Specially formulated to dissolve insect and other organic residues from films and paint.

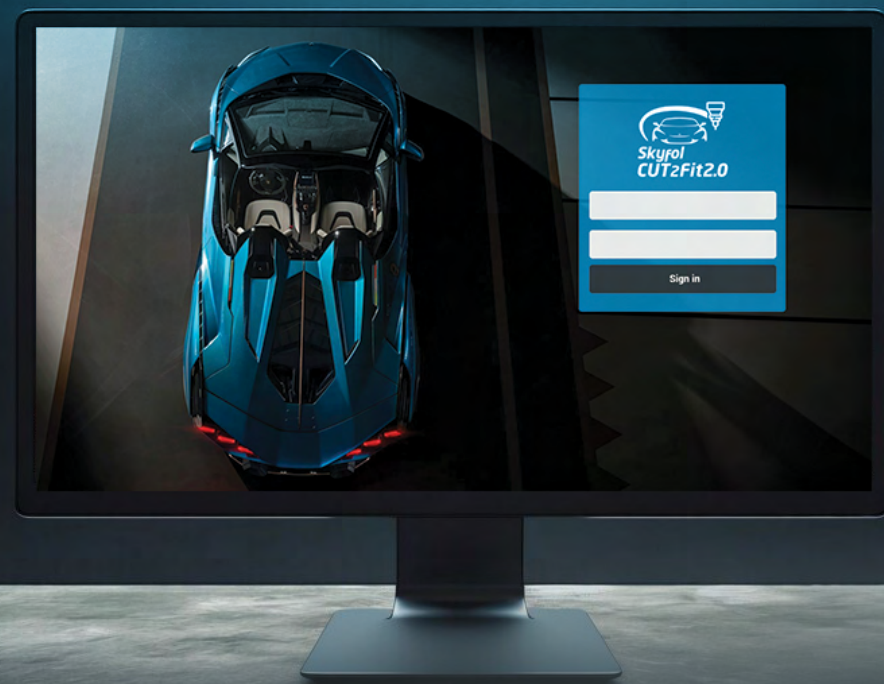

CERAMIC SILENT

Sprayable sealant that creates an extremely hydrophobic, smooth, and glossy surface. Enhances the performance of PPF and existing ceramic coatings.

Our Own Cutting Software

We are pleased to introduce our in-house developed cutting software, **Skyfol Cut2Fit**, which debuted this year. The program offers a wide range of new features and capabilities that support precise and efficient film cutting, simplifying the entire installation process.

The software operates on the Autocut base system, enhanced with **over 10,000 vector templates** covering both body panels and glass surfaces. The database is continuously expanding with new vehicle models, providing an ever-growing selection of templates for **paint protection film** and **window film** applications alike.

- ▶ easy operation
- ▶ clear and intuitive menu structure
- ▶ continuously expanding, extensive database
- ▶ credit-based usage with no time limits

Our software features a **user-friendly interface**, making it easy and intuitive to use.

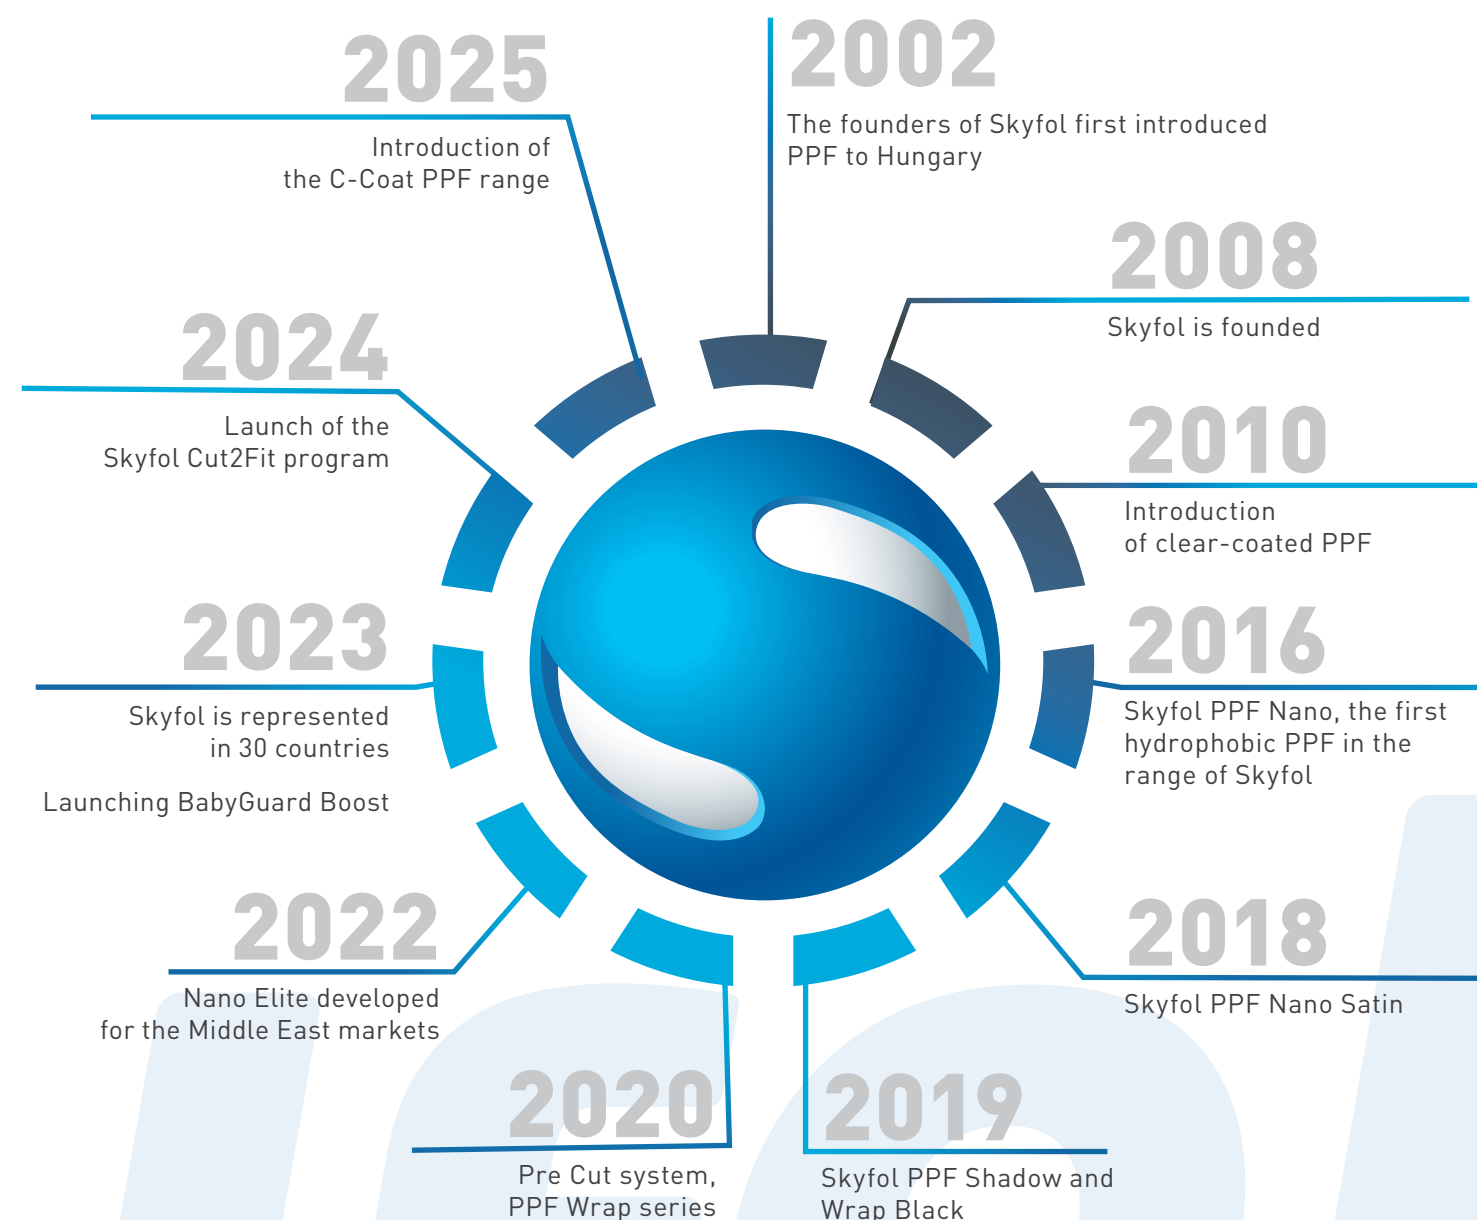

Watch our video for a **step-by-step guide** on how it works.

Our reliable software is built on a **precise and accurate scanning process**.

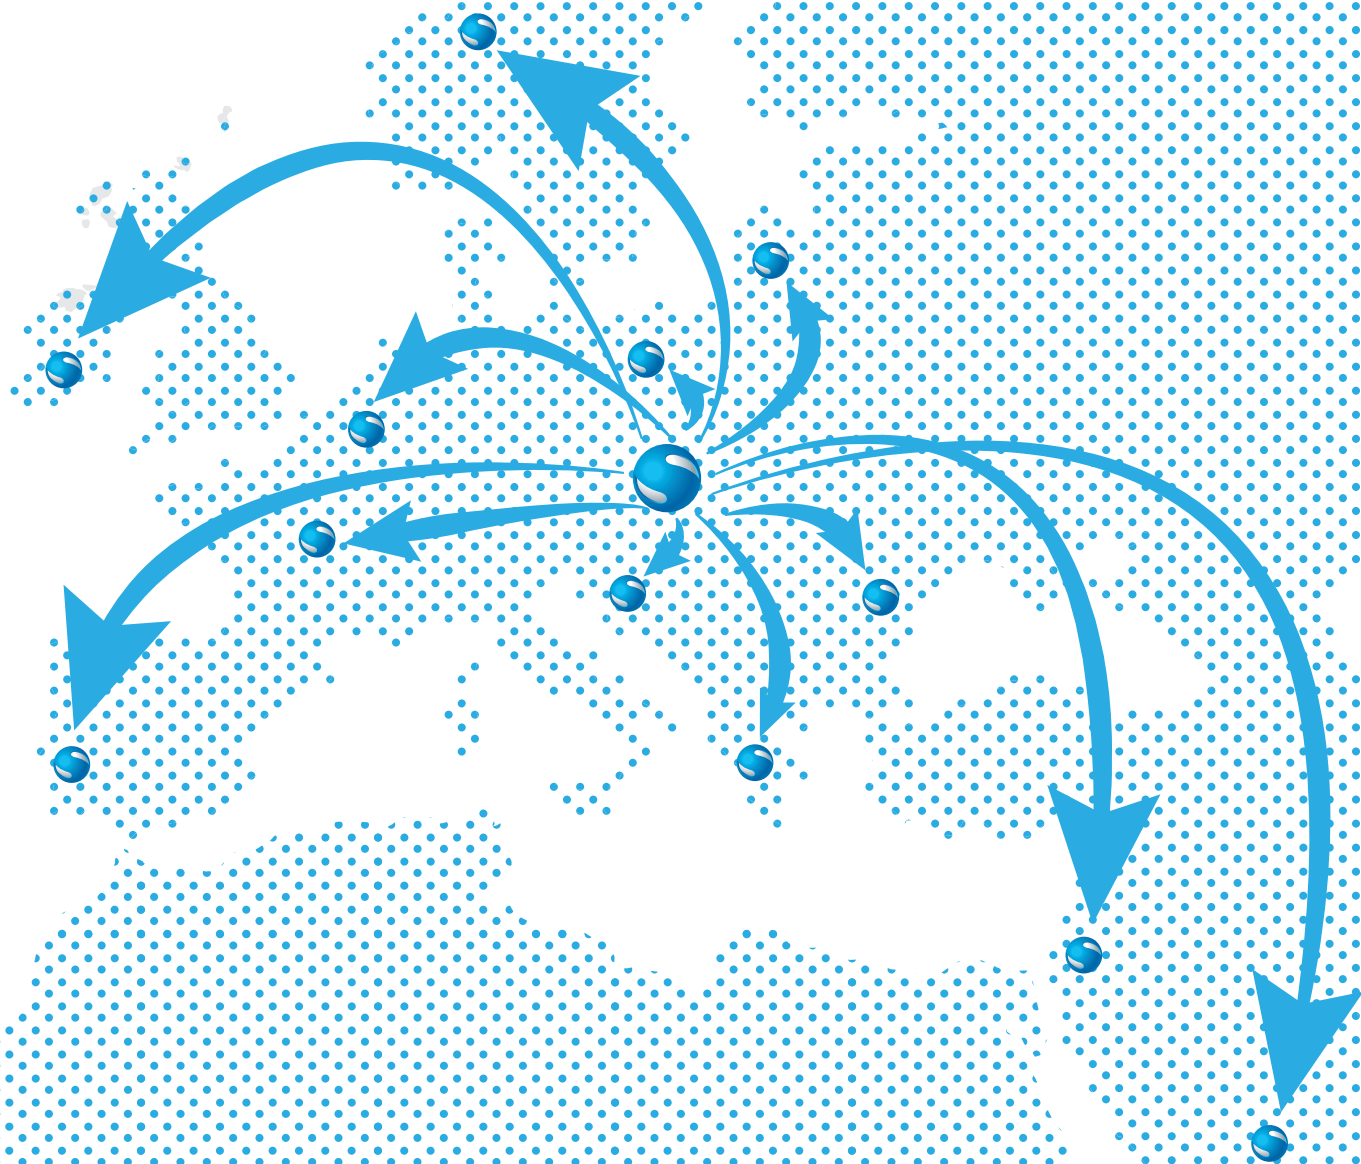

PAINT PROTECTION FILMS

Pioneer in the paint protection film industry, Skyfol was among the very first companies bringing PPF technology to Europe. During the past 20 years, Skyfol has been an innovator in the PPF industry, introducing one of the first clear-coated films in 2010, the first hydrophobic film in 2016 and the first flexible no-stain coating in 2022. Skyfol always seeks better solutions. Working with a sole distributor per country, Skyfol today has distributors in 30+ countries and offers a professional service with a wide range of products that are hard to match in the industry. Be a part of this successful story and team up with Skyfol paint protection films!
